	REVISION : 01	AUTHORIZED BY : Albert Lin
	DATE : 2026.02.06	CLASSIFICATION : Optical Transceiver

1. General Description

The Transceiver is a high-performance, cost-effective module for optical data communication applications supporting 400G Ethernet. The Transceiver is designed to operate in switch and router applications supporting QSFP-DD MSA / 400G DR4 compliant traffic for up to 500m links. The Transceiver can convert 8-channel 53.125Gb/s electrical data to 4-channel 106.25Gb/s optical signals. Similarly, it optically converts 4-channel 106.25Gb/s optical signals to 8-channel electrical data output on the receiver side. It has been designed to withstand the maximum range of external operating conditions including temperature, humidity and EMI. The module offers very high functionality and feature integration, accessible via a two-wire serial interface.

2. Production Features

- QSFP-DD MSA compliant
- 8x53.125Gb/s PAM4 electrical interface (400GAUI-8)
- Maximum power consumption 8W
- MPO-12 APC connector
- Up to 500m transmission on single mode fiber
- Operating case temperature: 0°C~70°C
- Single 3.3V power supply
- RoHS-6 compliant

TITLE 400G QSFP-DD DR4 500m Transceiver	DOC No. RFD-20220826006-003	
	REVISION : 01	AUTHORIZED BY : Albert Lin
	DATE : 2026.02.06	CLASSIFICATION : Optical Transceiver

3. Production Application

- 400GBASE-DR4 Ethernet
- QSFP-DD MSA Rev 5.1
- CMIS Rev 4.0
- GR-468-CORE

4. Production Description

Notes:

1. QSFP-DD uses common ground (GND) for all signals and supply (power). All are common within the QSFP-DD module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.
2. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 shall be applied concurrently. Requirements defined for the host side of the Host Card Edge Connector are listed in Table 6 from QSFP-DD MSA. VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 may be internally connected within the module in any combination. The connector Vcc pins are each rated for a maximum current of 1000 mA.
3. All Vendor Specific, Reserved and No Connect and ePPS(if not used) pins may be terminated with 50 ohms to ground on the host. Pad 65 (No Connect) shall be left unconnected within the module. Vendor specific and Reserved pads shall have an impedance to GND that is greater than 10 kOhms and less than 100 pF.
4. Plug Sequence specifies the mating sequence of the host connector and module. The sequence is 1A,2A,3A,1B,2B,3B. (see Figure 2 for pad locations) Contact sequence A will make, then break contact with additional QSFP-DD pads. Sequence 1A,1B will then occur simultaneously, followed by 2A,2B, followed by 3A,3B.

Block Diagram of Transceiver

<Transmitter Section>: The MQD-35F2C converts 8-channel 53.125Gb/s electrical data to 4-channel 1310nm 106.25Gb/s optical signals for 425Gb/s optical transmission.

<Receiver Section>: Similarly, it optically converts 4-channel 1310nm 106.25Gb/s optical signals to 8-channel electrical data output on the receiver side.
